USB WIRELESS NETWORK ADAPTERS

PASSER WIRELESS NETWORK ADAPTERS are used for connection with wireless router or wireless access point (WAP). They are usually connected to a standard USB port available on the back of your computer. LED light on the adapter indicate its power and network link status. These adapters do not require a separate power cord, because such USB devices draw power from the host computer. On some units, the antenna can be adjusted manually to improve WiFi reception. Their small size and easy setup make these adapters an attractive choice for those who want to simplify their network setup.

TECHNICAL SPECIFICATIONS

Security Standards	64/128-bit WEP, WPA, WPA2
Transmission Rates	150 Mbps
Wireless Protected Setup	WPS (PBC AND PIN) enabled device
Software Enabled Access Point	Supports Soft AP to establish quick wireless LAN network
Wireless Functions	Enable/Disable Wireless Radio, WDS Bridge, WMM, Wireless Statistics
Supported OS	Windows Vista/XP/2000/7, Linux, MAC OS
